What is a Competency?

- Used in workplace and educational institutions to express standard level of performance that can be assessed to measure if the competency has been achieved.
- Often framed in terms of knowledge, skills, and attitudes or “KSAs.”
- Competency statements are not “wish lists” or lists of content topics. They describe acceptable level of performance and the skills needed to perform at that level.
- A listing of competencies is not a curriculum, but can facilitate the process of developing curriculum.
Competencies in Global Health Education

• Interest in global health among students in high-income countries and worldwide

• Rapid growth and haphazard expansion led to lack of agreed-upon definitions and failure to standardize curricula and competencies.

• Hence push to develop competencies.
Many professions have developed global health competencies - nursing, medicine, and dentistry to develop global health competencies.

A competency matrix for global oral health.
Benzian H¹, Greenspan JS², Barrow J², Hutter JW², Loomer PM², Stauf N², Perry DA².

Global health competencies for nurses in the Americas.
Growing awareness that global health requires a broad range of professionals from health and non-health disciplines. INTERPROFESSIONAL APPROACH.

This is reflected in the most commonly accepted definition of global health Koplan et al.

- ... Global health emphasizes transnational health issues, determinants, and solutions [and] involves many disciplines within and beyond the health sciences and promotes interdisciplinary collaboration ...”

Identifying Interprofessional Global Health Competencies for 21st-Century Health Professionals

Kristen Jogerst, BS, Brian Callender, MD, Virginia Adams, RN, PhD, Jessica Evert, MD, Elise Fields, PharmD, Thomas Hall, MD, DrPH, Jody Olsen, PhD, MSW, Virginia Rowthorn, JD, Sharon Rudy, PhD, Jiabin Shen, M.Ed, Lisa Simon, DMD, Herica Torres, MSN, Anvar Velji, MD, Lynda L. Wilson, MSN, PhD

Hanover, NH; Chicago, IL; Washington, DC; San Francisco, Martinez, and Elk Grove, CA; Baltimore, MD; Birmingham, AL; Cambridge, MA; Albuquerque, NM
Level I: Global Citizen Level
Competency sets required of all post-secondary students pursuing any field with bearing on global health.

Level II: Exploratory Level
Competency sets required of students who are at an exploratory stage considering future professional pursuits in global health or preparing for a global health field experience working with individuals from diverse cultures and/or socioeconomic groups.

Level III: Basic Operational Level
Competency sets required of students aiming to spend a moderate amount of time, but not necessarily an entire career, working in the field of global health.

Two sub-categories exist in Level III:

Practitioner-Oriented Operational Level: Competency sets required of students: 1) practicing discipline-specific skills associated with the direct application of clinical and clinically-related skills acquired in professional training in one of the traditional health disciplines; and 2) applying discipline-specific skills to global health-relevant work from fields that are outside of the traditional health disciplines (e.g., law, economics, environmental sciences, engineering, anthropology, and others).

Program-Oriented Operational Level: Competency sets required of students within the Basic Operational Level in the realm of global health program development, planning, coordination, implementation, training, evaluation, or policy.

Level IV: Advanced Level
Competency sets required of students whose engagement with global health will be significant and sustained. These competencies can be framed to be more discipline-specific or tailored to the job or capacity in which one is working. This level encompasses a range of study programs, from a masters level degree program, up to a doctoral degree with a global health-relevant concentration. Students enrolling in these programs are usually committed to a career in global health-related activities.
1) Global Burden of Disease
2) Globalization of Health and Healthcare
3) Social and Environmental Determinants of Health
4) Capacity Strengthening
5) Teamwork/Collaboration and Communication
6) Ethical Reasoning
7) Professional Practice
8) Health Equity and Social Justice
9) Program Management
10) Social, Cultural and Political Awareness
11) Strategic Analysis

Legend:
Global Citizen Level Domains: # 1, 2, 3, 5, 6, 7, 8, 10 [8 Domains & 13 competencies]
Program-oriented Basic Operational Level Domains: #4, 9 & 11 [11 Domains & 39]
Each competency categorized as: Knowledge, an Attitude and / or a Skill (Bloom’s Taxonomy)

Toolkit (2nd ed.) [Launch Fall 2018]

• Who?
  • CUGH Competency Sub-Committee (Toolkit Taskforce)

• Goal?
  • Update and Improve the Toolkit

• How?
  • Collaboration & contributions from previous and new contributing scholars
What’s NEW in Toolkit 2nd Edition?

• Peer-reviewed Content
• Summaries/Annotations for Listed Resources
• Interactive Navigation Features
• More Professional Finishes
**Competency 1a:** Describe the major causes of morbidity and mortality around the world, and how the risk of disease varies with regions.

*(Global Citizen, Exploratory and Basic Operations Levels)*

**Teaching Strategies:**

Share basic background of this topic through articles, videos, and/or interactive lecture in order to define key terms, morbidity and mortality measurements and factors that contribute/cause morbidity and mortality around the world. The factors that cause morbidity and mortality are more fully reviewed in later competencies (3b, 3c, 7b, 8a, 8c 11a). Interactive possibilities for a flipped classroom or team-based learning setting include having students hypothesize their own hypothetical measure for the burden of disease before being introduced to those currently in practice. With a general understanding of morbidity and mortality, students can then explore and discover the extent of which the risk of disease varies regionally through online resources and in-class/out-of-class assignments. You could also create a quiz on key terms and/or measures. Some ideas for learning activities include student presentations or papers analyzing morbidity and mortality of a particular region with the world or other regions.

**Key Terms**

Morbidity, Mortality, Disability Adjusted Life Years (DALYs), Incidence, Prevalence, Multiple Determinants of Health
Competency 1a: Describe the major causes of morbidity and mortality around the world, and how the risk of disease varies with regions. (Global Citizen, Exploratory and Basic Operations Levels)

By the end of this class, students will be able to:

1. Increase capacity to describe the burden of disease between and within countries
2. Discuss risk factors for various health conditions
3. Describe the demographic and epidemiological transitions that refer to changing patterns of disease
Burden of Disease

- Rural people
- Disadvantaged people
- Women
- Poor people
- Uneducated people
- Lower socioeconomic status
- Region/country
- Others?
Discussion: Risk Factors for Refugees

• We have discussed many determinants of disease and will continue to examine during the coming weeks.

• Although we have examined the conditions and risk factors for people living in other countries, we want you to take a moment to consider the health conditions and status of one particular group of people born in other countries, but because of unique circumstances, are now living in the United States.

• Referred to as refugees or displaced persons
The Problem with Competencies in Global Health Education
Quentin Eichbaum, MD, PhD, MPH, MFA, MMHC

Academic Medicine
ACQUIRED AND PARTICIPATORY COMPETENCIES IN GLOBAL HEALTH EDUCATION: DEFINITION AND ASSESSMENT
--Manuscript Draft--

Slide Credit: Quentin Eichbaum, MD, Chair CUGH Education Committee
The problems....

1. Insufficiently **inclusive** of input from LMICs/global south
   - Often developed by committee in HIC programs
   - Often serves primarily HIC program interests

2. Insufficiently **context** specific
   - Generic - to be transferable across contexts (convenient!)

3. Unresolved “**individualist/collectivist disjunction**”
   - HICs vs LMIC cultural/learning differences

4. Inadequate **assessment** methods

Slide Credit: Quentin Eichbaum, MD, Chair CUGH Education Committee
Contexts – free or linked?

• If context-free
  • Competence practitioner is “generally competent”
  • Competencies can be taught and practiced independent of the particularities of the context
  • Competency in one context predicts competence in others

• If context-linked
  • Practitioner is competent with respect to specific contexts
  • Competency MUST be linked & taught with respect to context
  • Competence in one context does NOT predict competence in others

Slide Credit: Quentin Eichbaum, MD, Chair CUGH Education Committee
• **Acquired Competency**
  - knowledge & skills
  - Ophthalmology – Medical Knowledge
    - “Must demonstrate competencies in their knowledge of cataract surgery, contact lenses, corneal and external disease, eye abnormalities, glaucoma...” (IV.A.5.b)

• **Participatory Competency**
  - Communication, collaboration etc
  - Ophthalmology – Interpersonal and Communications Skills
    - “…communicate effectively with patients, families, and the public, as appropriate, across a broad range of socioeconomic and cultural backgrounds.”

Slide Credit: Quentin Eichbaum, MD, Chair CUGH Education Committee
Can interpret viral loads and CD4 counts in patients with HIV/AIDS.

Counsel a dying patient.
